

O-LYNX Results software as used for Event Centre Results.

The window layout can be saved and restored so that the screens can be set up before the event.

First, second and third places highlighted in red, blue and green.

Runners shown with a green background are still out on the course.

Runners will move down the list of results as their total time becomes greater than runners who have finished.

A screen with vertical resolution of 1050 pixels will show up to 50 runners without scrolling.

The runners have not started so no times are shown.

Optionally switch the display of elapsed times off to show just a list of final results ordered by placing.

Runners who have not started, those with **mispunches (MP)** or who **did-not-start (DNS)** will be shown at the bottom. Other runners will have a status of **started (ST)** or **finished (OK)**.

Auto-scroll turned on. In this mode the list of runners will automatically scroll to be able to show more runners than will fit in the allotted space.

Position, Total Time and Time the behind winner are updated every 20 seconds.

The screenshot shows the O-LYNX Results software interface with multiple race result windows. Each window displays a table of runners with columns for Position, Name, Club, Total Time, and Difference. The interface includes various icons for switching views and auto-scrolling.

Pos	Name	Club	Total	Diff.
1 OK	Sean Morrison	Ha...	28.31	13.30
2 OK	Callum Hennes	Ha...	28.45	13.45
3 OK	Devon Becken	Ha...	27.03	13.20
4 ST	Conor Wike	Ha...	27.65	
5 OK	Forus Brankley	Ha...	28.15	13.41
